

Functional Requirements

1. Client Functions

- Register and manage profile
- Search and select law firms
- Submit consultation requests
- View and track cases, schedules, and hearings
- Upload required documents
- Make payments and view transaction history

2. Intern/Clerk Functions

- Receive and manage assigned tasks
- Prepare and manage legal documents
- Maintain client-lawyer interaction records
- Verify and organize case documents
- Assist in client onboarding
- Draft meeting notes for lawyer approval

3. Lawyer Functions

- Manage profile and availability
- View and manage assigned cases and consultations
- Communicate with clients and staff
- Review interactions and meeting records
- Maintain case documents and progress
- Track hearings, tasks, and deadlines

4. Administrative Functions

- Manage firm profile and settings
- Assign lawyers and interns to cases
- Monitor workload and performance
- Control access and confidentiality policies

- Manage billing, payments, and financial reports
 - Handle case reassignment and data transfer
-

Non-functional Requirements

1. Performance

- Fast response for case data, schedules, and search
- Support multiple concurrent users without slowdown
- Real-time updates for hearing dates, documents, and case status

2. Security

- Role-based authentication and authorisation
- End-to-end encrypted communication
- Strict client confidentiality
- Controlled access to sensitive case, document, and billing data

3. Data Integrity & Reliability

- Isolated client data with no cross-client leakage
- Secure document storage with version control
- Complete audit trail for communications and updates
- Data backup and recovery support to prevent data loss

4. Usability & Accessibility

- Responsive design for desktop, tablet, and mobile
- Simple workflows with minimal user actions
- Multi-language support for regional users
- Clear dashboards for case status, hearings, and reminders

5. Scalability

- Support growth in users, firms, cases, and documents
- Handle increasing transactions without redesign

- Enable future integration with external systems (courts, payment gateways, etc.)

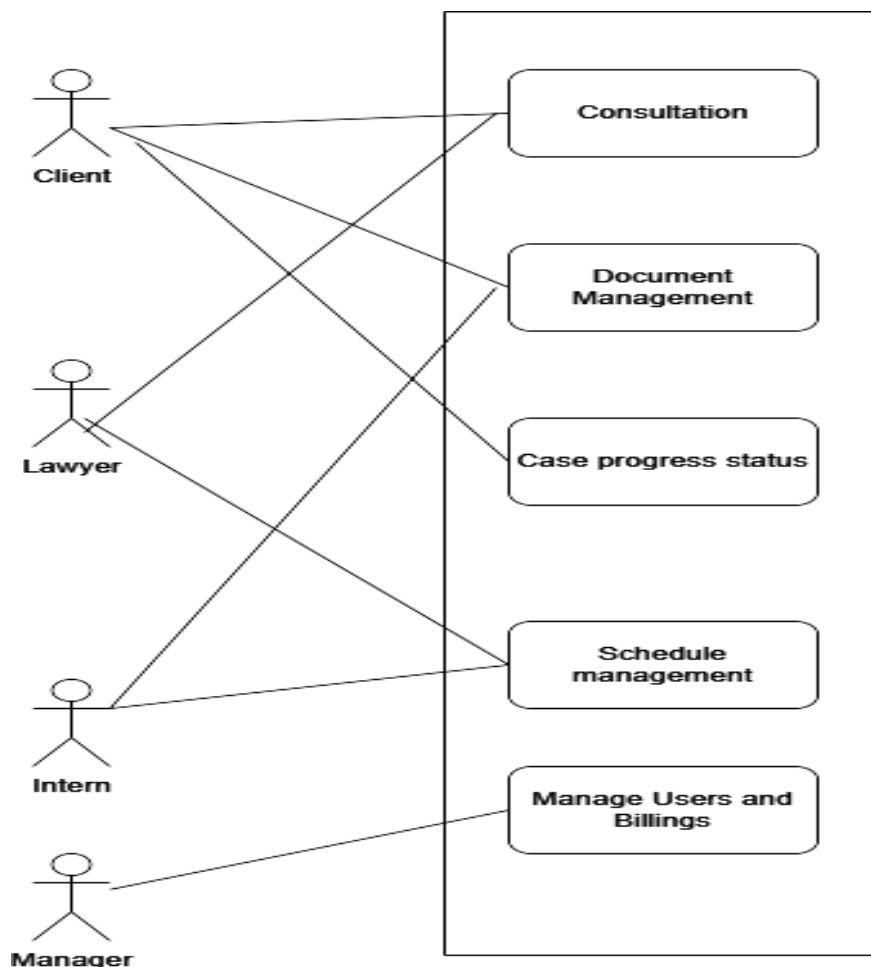

6. Availability & Continuity

- High system uptime for uninterrupted access
 - Continuous access to past communication and documents
 - Support for long inactivity periods without data loss
-

UML Diagrams

UML Diagrams

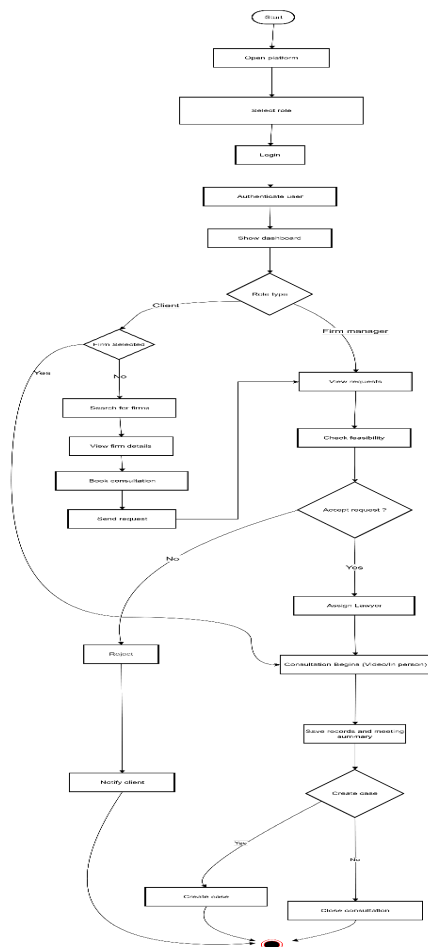

Use Case Diagram

System use case diagram showing Client, Lawyer, Intern, and Manager interactions with Consultation, Document Management, Case Progress Status, Schedule Management, and User/Billing Management functionalities

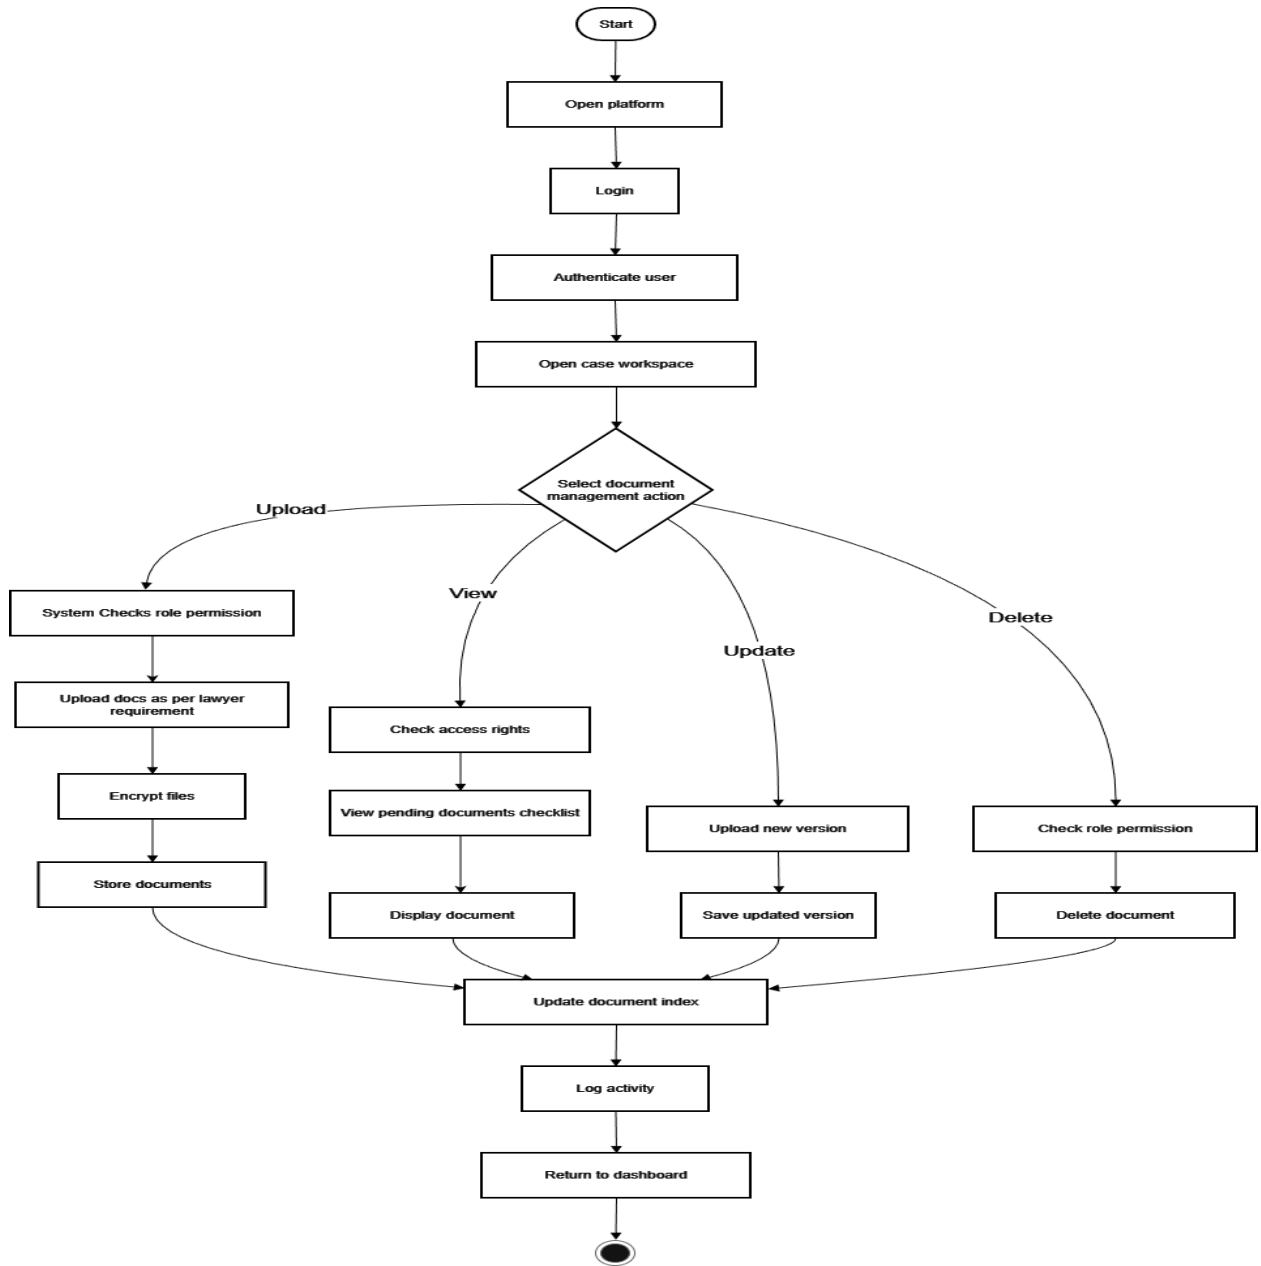

Activity Diagrams

Consultation Process

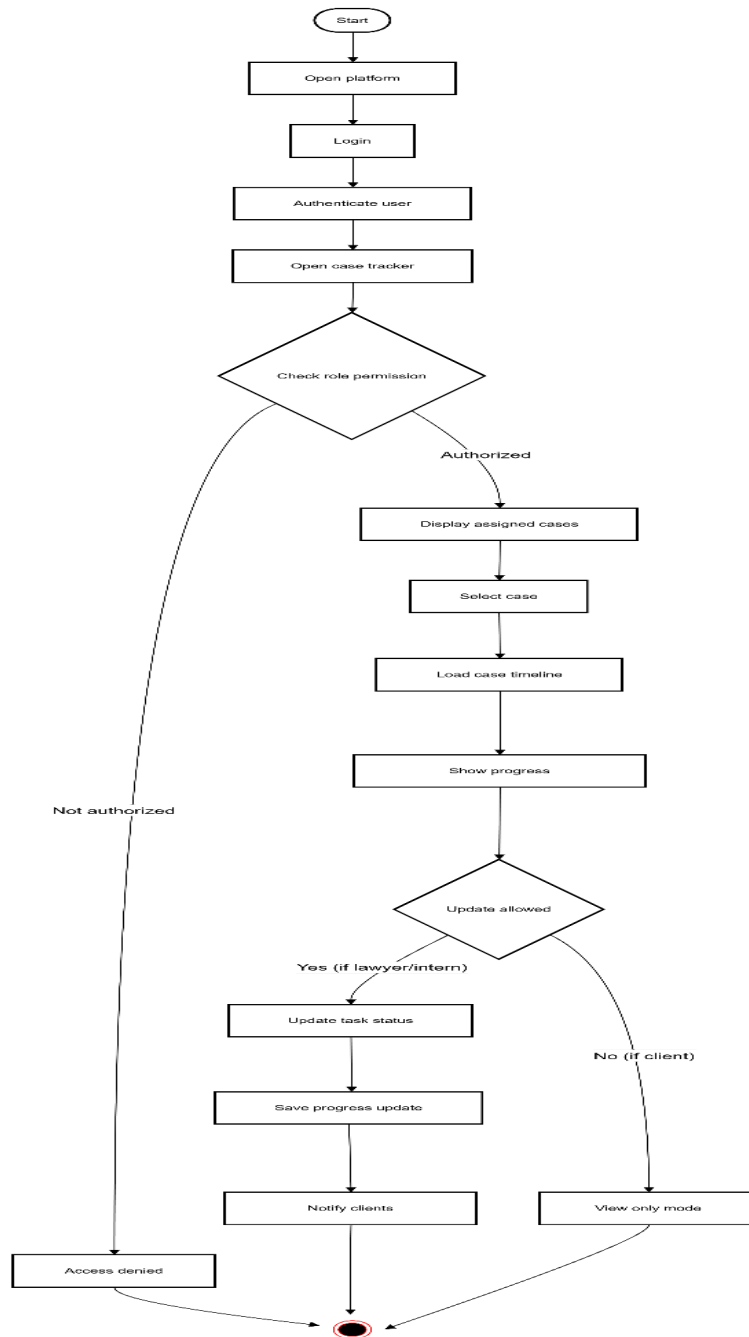

Complete consultation workflow including practitioner search, online/offline consultation paths, document handling, payment processing, and consultation completion

Document Management

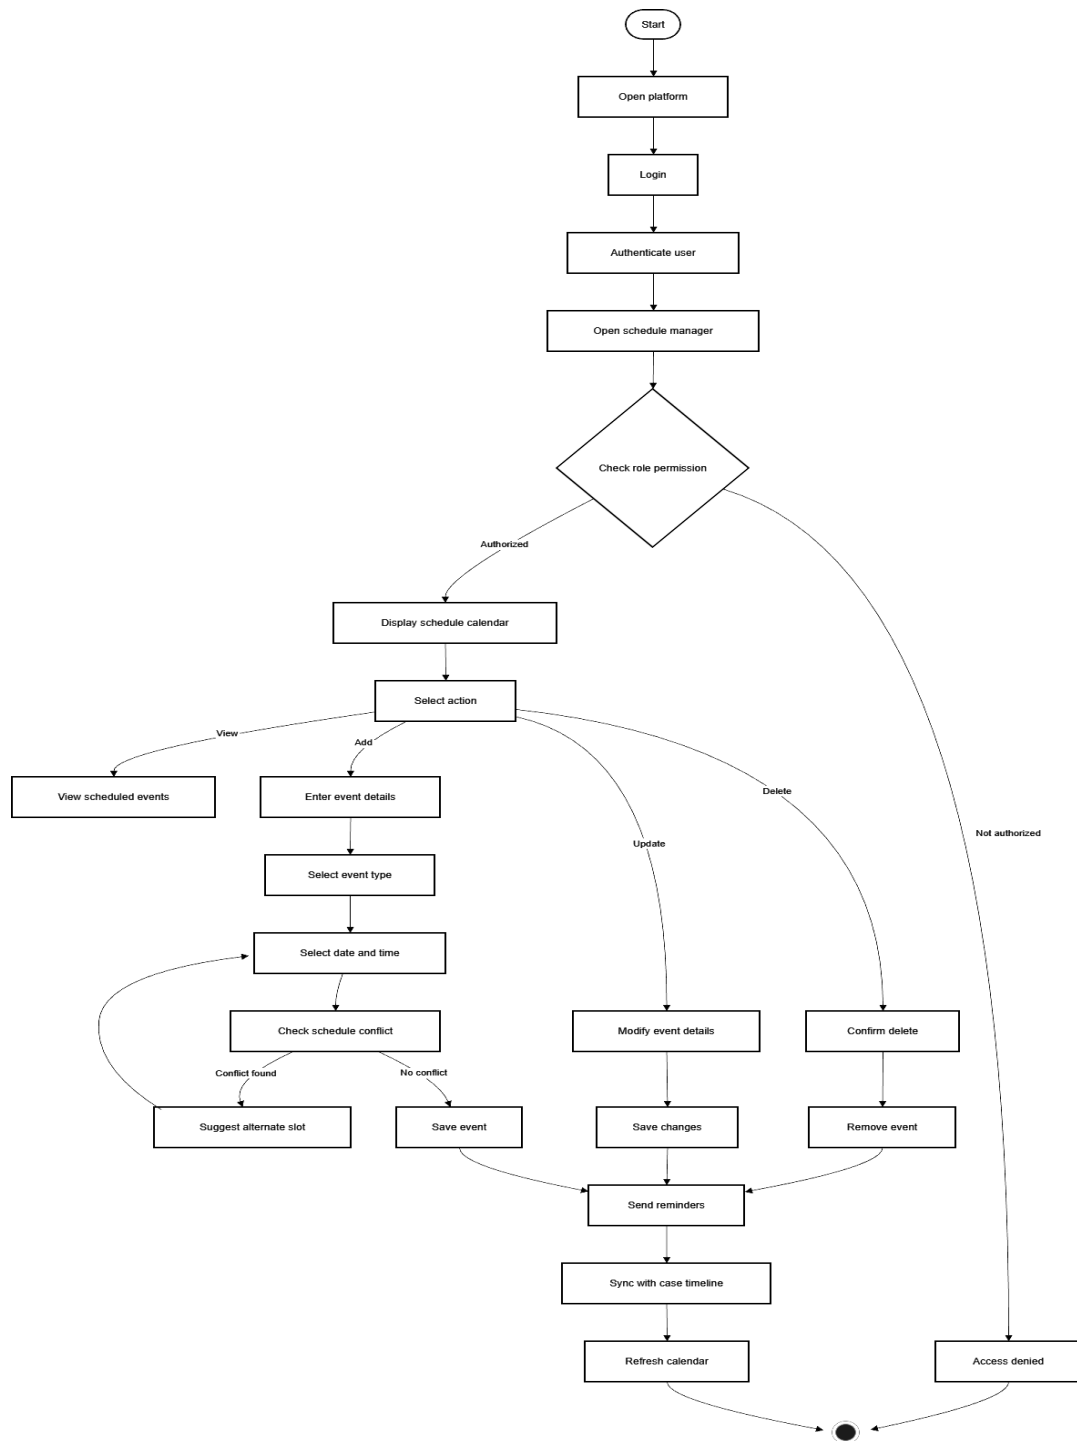

Document lifecycle operations: upload with encryption, view with access control, update with versioning, delete with permissions, and comprehensive activity logging

Case Tracker

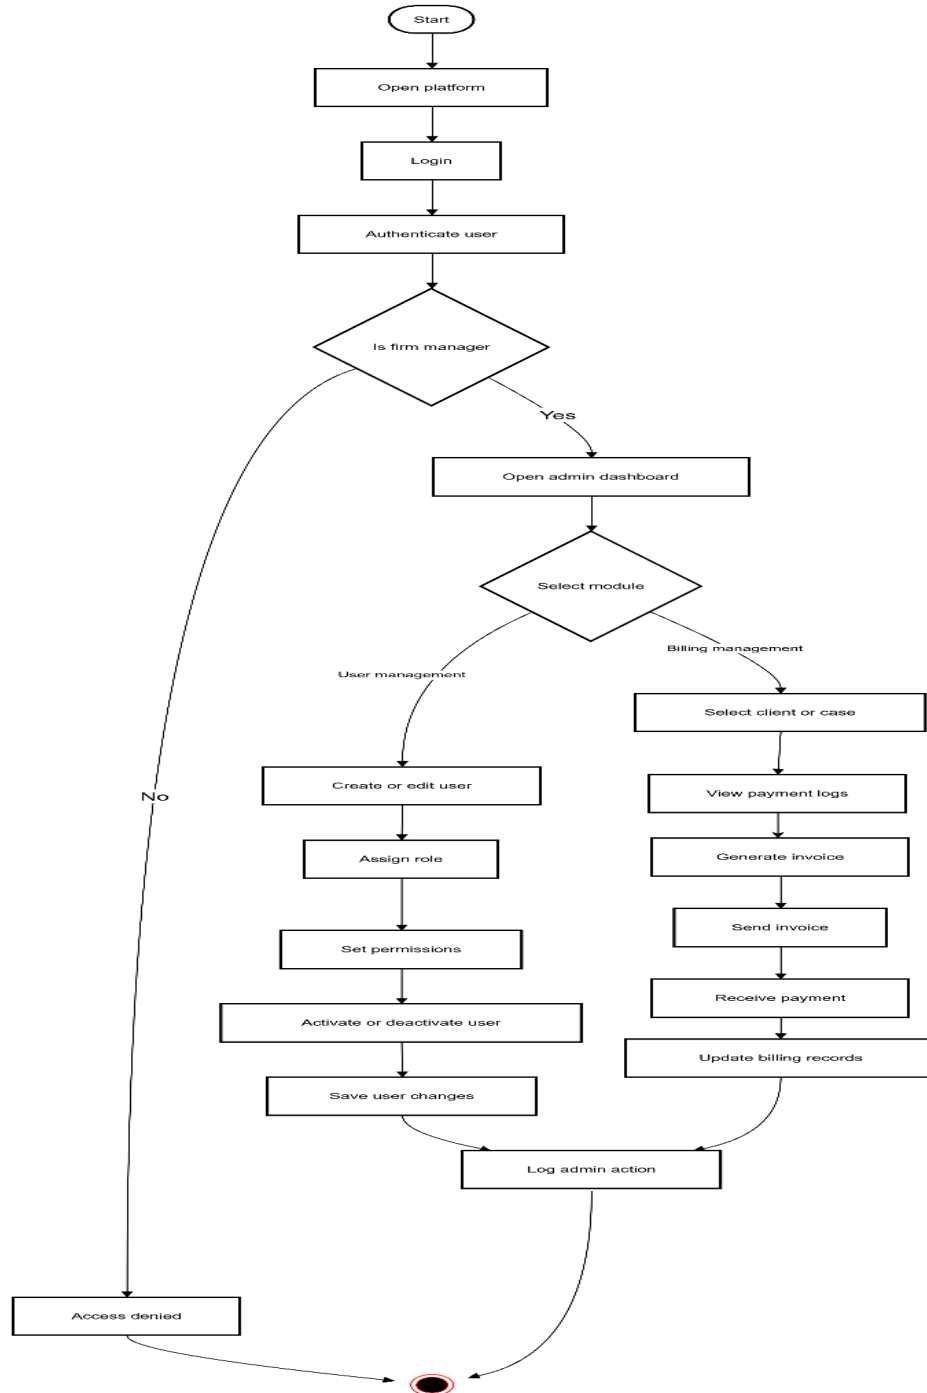

Case tracking system with role-based access: lawyers/interns can update progress and notify clients; clients have view-only access to case status and timelines

Schedule Manager

Comprehensive schedule management: view events, create new events with type/date/time selection, conflict detection with alternative suggestions, modify/delete events, set reminders, and sync with case timeline

User Billing

Administrative billing and user management: create/edit users with role assignment, activate/deactivate users, select clients/cases, view payment logs, generate and send invoices, receive payments, and update billing records

Sequence Diagram

Multi-actor authentication flow showing login verification and role-based authorization for Client, Lawyer, Intern, and Manager accessing System, CaseTracker, DocumentStore, Scheduler, and Billing modules

Document Information

System: Law Firm Management Platform
Version: 1.0

Date: February 2026

Status: Software Requirements Specification

This document outlines the comprehensive functional and non-functional requirements along with UML modeling for a law firm management system designed to facilitate seamless interaction between clients, lawyers, interns/clerks, and administrative staff.
